Obs: TR significa bobinas de trabalho e são compostas de 2 grupos de 5 bobinas com passo 4-6-8-10-12, AR significa bobinas de arranque e são compostas de 2 grupos de 4 bobinas com passo 6-8-10-12. De 1,0 a 5,0HP a ligação do bobinado é série (tipo B), de 5,5 a 10,0HP a ligação será paralelo para as tensões de 220 e 254V, para 440V a ligação permanece série. O sentido de rotação dos motores é horário.

Obs: Os motores de 1,0 a 13,0HP possuem 1 grupo de 4 bobinas por fase e passo **10-12-14-16**.

Para motores de 14,0 a 35,0HP o bobinado é composto de 2 grupos de 2 bobinas por fase e passo **10-12**.

Os 2 grupos que constituem a fase são ligados em série até a potência de 18,0HP e em paralelo de 20,0 a 50,0HP. O bobinado é meio-imbricado para todas as potências.

Nos motores de 2 tensões utilizar os cabos de menor secção, correspondente a cada HP.

Ex: 30,0 HP 220/380V – utilizar 6x6,0mm².
